Prepare and deliver a 10-15 minute presentation that covers the following:

- **Summary of the project**
  - What was the purpose of the system?
  - What was promised?
  - What was delivered? (partial or scrapped)
- **Why was this a troubled or failed project**
- **What were the reason(s)?**
- **How would you “fix” it?**
  - Make it work in the first place?
  - Salvage it in some way?
  - Change the scope to solve the “right” problem?
  - ...
- **Could it have been successful or was it doomed to failure?**

Don’t settle for the non-technical reasons that you will find in most information sources. Dig deeper and use what you have learned to try and discover the true causes.

The oral rubrics on the class website will be used to evaluate your presentation.
